

## AUGEO® CLEAN MULTI

Rhodia Brasil S.A. declares that **Augeo® Clean Multi** is obtained from the acetalization reaction of glycerin.

The IFRA Code of Practice covers the manufacture and handling of all fragrance materials, for all types of applications. The IFRA Standards form the basis for the globally accepted and recognized risk management system for the safe use of fragrance ingredients and are part of the IFRA Code of Practice. These Standards limit or prohibit the use of certain fragrance materials. IFRA gathers information about the safety of individual fragrance ingredients and analyzes this information to determine their safety under normal and expected conditions of product use. The conclusions of the IFRA safety reviews are published in the IFRA Code of Practice, which provides critical guidance for fragrance formulators and cosmetic product manufacturers. New scientific developments on analyzed substances often justify changes to the Code of Practice and Standards.

**Augeo® Clean Multi** (CAS number 100-79-8) is currently on the IFRA Transparency List, latest version published in 2022. Under this list, **Augeo® Clean Multi** is classified as a fragrance functional component: “any basic substance necessary for the functionality and/or, durability of a fragrance ingredient or mixture (e.g. antioxidant, preservative, diluents, solvent, etc.)”.
